1. *General Requirements.* All signs shall be designed and constructed in a safe and stable manner in accordance with the Township's adopted building code and electrical code. All electrical wiring associated with a freestanding sign shall be installed underground.
2. *Architectural Compatibility.* Signs shall be designed and constructed to be consistent with the architectural design of the building they identify, as determined by the Zoning Administrator or Planning Commission.
3. *Building Code.* All signs shall be designed to comply with minimum wind pressure and other requirements set forth in the adopted Building Code.
4. *Framework.* All signs shall be designed so that the supporting framework, other than the supporting poles on a freestanding sign, is contained within or behind the face of the sign or within the building to which it is attached so as to be totally screened from view.

B. Illumination.

1. *General Requirements.* If illumination is proposed, signs shall be illuminated only by steady, stationary, shielded light sources directed solely at the sign, or internal to it. Indirect lighting of signage shall be encouraged over internal illumination.
2. *Non-Glare, Shielded Lighting.* Use of glaring undiffused lights or bulbs shall be prohibited. Lights shall be shielded so as not to project onto adjoining properties or thoroughfares, and shall not exceed fifteen (15) footcandles, measured perpendicular to the sign face, at a distance of four (4) feet.
3. *Traffic Hazards.* Sign illumination that could distract motorists or otherwise create a traffic hazard shall be prohibited.
4. *Bare Bulb Illumination.* Illumination by bare bulbs or flames is prohibited.

C. Location.

1. *Within a Public Right-of-Way.* No sign shall be located within, project into or overhang a public right-of-way, except as permitted by the Washtenaw County Road Commission.
2. *Setback Requirements.* All signs shall comply with the setback requirements for this district they are located in, except as otherwise permitted herein, and provided that no freestanding sign is located closer than 15 feet from any lot line.
3. *Clear Vision Area for Motorists.* No sign shall be erected within the clear vision area at the intersection of any two streets or other public ways. The clear vision area is formed by two lines each twenty-five feet long measured along the right-of-way for both streets from the point of intersection and connected by a third line to form a triangle. Signage must also comply with the requirements of the Washtenaw County Road Commission.

- D. Height. No freestanding sign shall be greater than six (6) feet in height, unless otherwise provided in this Section.
- E. Measurement.
1. *Sign Area Measurement*. Sign area shall be computed as follows:
    - a. *General Requirements*. Where a sign consists of a generally flat surface or sign face on which lettering and other information is affixed, the sign area shall be computed by measuring the entire face of the sign including any framing or borders, but not including the base, pedestal, or other supports upon which the sign may be mounted.
    - b. *Individual Letters*. Where a sign consists of individual letters and/or logo affixed directly to a wall or building, the area of the sign shall be computed by measuring the area of the envelope required to enclose the lettering and/or logo.
    - c. *Free-Standing Signs*. The area of a double-faced freestanding sign shall be computed using only one (1) face of the sign provided that: 1) the outline and dimensions of both faces are identical, and 2) the faces are back-to-back

so that only one face is visible from any given direction. In the case of a multi-faced free-standing sign having more than two sides, or those having two sides not back-to-back as described above, the area of the sign shall be computed using the total of all faces of the sign.

- d. *Cylindrical Sign.* The area of a cylindrical ground sign shall be computed by multiplying the circumference of the cylinder by its height.
2. *Height Measurement.* The height of a sign shall be measured along a straight vertical line from the average grade beneath the sign to the highest point of the sign or supporting structure.
  3. *Setback and Distance Measurements.* The following guidelines shall be used to determine compliance with setback and distance measurements:
    - a. The distance between two signs shall be measured along a straight horizontal line that represents the shortest distance between the two signs.
    - b. The distance between a sign and a parking lot or building shall be measured along a straight horizontal line that represents the shortest distance between the outer edge of the parking lot or building.
    - c. The distance between a sign and a building or property line shall be measured along a straight horizontal line that represents the shortest distance between the sign and the building.

- A. Inspection of New Signs. All signs for which a permit has been issued shall be inspected by the Zoning Administrator, or his or her designee, when erected. Approval shall be granted only if the sign has been constructed in compliance with the approved plans and applicable Zoning Ordinance and Building Code standards. Failure to receive the Zoning Administrator's approval for a completed sign shall constitute a determination that the sign is in violation of this Ordinance, in which case the owner and/or erector of such sign may be subject to legal action.

In cases where fastenings or anchorages are to be eventually bricked in or otherwise enclosed, the sign erector shall advise the Zoning Administrator,

or his or her designee, when such fastenings are to be installed so that inspection may be completed before enclosure.

- D. Substitution. No non-conforming sign shall be replaced with another non-conforming sign.
- E. Modifications to the Principal Building. Whenever the principal building on a site on which a non-conforming sign is located is modified to the extent that site plan review and approval is required, the non-conforming sign shall be removed.
